ROHM Group Report 2017

ROHM Group Report 2017

The ROHM Group has communicated the Company Mission to its employees since its establishment in order to become a company that can be trusted and relied upon by society

COMPANY MISSION

Quality is our top priority at all times.

Our objective is to contribute to the advancement and progress of our culture through a consistent supply, under all circumstances, of high quality products in large volumes to the global market.

Policies to achieve the Company Mission are laid out and serve as guidelines for all business activities

BASIC MANAGEMENT POLICY

Secure reasonable profit through a concerted company-wide effort for a comprehensive quality assurance program. Develop globally leading products by improving upon technologies held by each department for continued advancement of the company.

Maintain healthy and vigorous lifestyles and refine intellect and humanitarianism, hence contributing to society.

Search extensively for capable human resources and cultivate them as cornerstones for building long-term prosperity.

BASIC QUALITY ASSURANCE POLICY

1. Promote internal standardization for the whole company and establish structures for QC management by data.
2. Conduct comprehensive and continuous research for the development of new technologies and products.
3. Proactively utilize methods of statistical control for all areas of company activities.
4. Establish quality assurance structures for all manufacturing processes.
5. Exert effort for cost reductions of each product by continual modernization of manufacturing systems.
6. Secure quality assurance programs of raw materials and components with our suppliers through contracts.

BASIC GOALS FOR EDUCATION AND TRAINING

1. Develop personnel at all levels to constantly strive to obtain new knowledge and to acquire empirical reasoning ability from a broad perspective.
2. Train staff to be dedicated as leaders in their field by utilizing their knowledge and experience.
3. Develop personnel who can overcome any adversity and strive towards achieving targets.
4. Train staff to place the highest value on teamwork, resulting from the combined efforts of all individuals.

BASIC POLICY FOR EDUCATION AND TRAINING

1. All employees will use every available opportunity to enhance self-development.
2. Those in leadership positions will exemplify model behavior at all times.
3. The emphasis of education is on-the-job training led by the supervisors through daily operations. Supplementary training off the job is also provided.
4. Each head of all management levels will appraise staff fairly and conduct effective training programs periodically and consistently.
5. Appraisals for each head of all management levels is based, as a general rule, on the success of staff education and training.

Although the environment surrounding the company has changed with the emergence of an information-based society and increased diversification of values, these policies remain unchanged and serve as the driving force and foundation of all business activities.

Message from the President

Achieving Sustainability

The idea of CSV (Creating Shared Value) to solve various social issues and put corporate activities into practice is gaining ground on a global scale.

For ROHM these initiatives are not new by any means, as we have contributed to the advancement of culture since our founding by providing innovative, high quality products based on our Company Mission.

And although the scale of our company and business environment have changed significantly over the 60 years since ROHM was established, our philosophies remain unchanged, becoming a part of our DNA.

Going forward, the ROHM Group will continue to pursue our Company Mission and Basic Management Policy while contributing to society by improving quality in all areas and taking on new challenges.

'Quality First' - Unwavering since our founding

ROHM offers a number of products that have become key devices in a wide range of fields, including the automobile industry which is experiencing increased innovation, the industrial equipment and home appliance markets where energy conservation and IoT conversion are required, and the rapidly evolving IT sector.

Supporting our product development is a vertically-integrated production system in which all steps, from development to production, are implemented within the Group. "Quality is our top priority at all times" has become our mindset from the very beginning and one which we continue to maintain and protect.

Injecting a high level of quality into every process ensures reliable traceability and an optimized supply chain, allowing us to contribute not only through our products but through our manufacturing system as well that guarantees stable delivery. In addition, ROHM offers an one-stop shop by providing a wide lineup that ranges from resistors and discrete products to ICs and modules.

We are focusing our efforts into providing solutions that leverage the full capabilities of the ROHM Group, which includes LAPIS Semiconductor and Kionix, in order to solve the major challenges faced by society and our customers.

Four growth solutions for solving social issues

Analog solutions are at the core of what we offer. We combine digital and software technologies with industry-leading analog expertise to deliver high efficiency, high accuracy power supplies and motor drivers.

By taking advantage of power device technology centered on cutting-edge SiC along with power solutions that combine control IC and module technologies to maximize the performance of these devices, ROHM contributes to increased energy conservation and miniaturization in the automotive and industrial equipment fields.

Meanwhile, in the field of IoT, which is undergoing considerable expansion, in addition to a broad variety of sensors we are developing sensor solutions that fuse control and wireless communication technologies. ROHM promotes technological innovation in a diverse number of fields, together with thin, ultra-compact electronic components for mobile solutions featuring increasingly advanced functionality.

Maintain healthy and vigorous lifestyles and refine intellect and humanitarianism in order to make meaningful contributions to society

More than anything, it is 'people' that make the greatest contribution in all corporate activities, and this word can be found in our basic management policy. We also believe that it's also important to create an environment in which human resources possessing diverse values and ideas can fully demonstrate their individuality and abilities in an increasingly globalized society.

The ROHM Group will continue to develop balanced human resources that combine rich humanity and intellect, create innovation through various exchanges, and provide high quality products that will meet the expectations of our stakeholders.

June 2017

Satoshi Sawamura

Satoshi Sawamura, President

Quality

Vertically Integrated Production System

Quality is incorporated into every process of our vertically integrated production system, from ingot pulling to finished products, embodying our pursuit of 'Quality First'.

We are further strengthening our activities to achieve the best production facilities in the world, for example through our proprietary ROHM Production System (RPS) that provides unparalleled quality by thoroughly removing all waste generated during operation, transportation, and delays.

High Quality

In pursuit of 'Quality First', we are engaged in activities to enhance quality in all processes, from development and production to marketing and services, throughout the entire Group.

Stable Supply

We ensure long-term, stable supply to ensure worry-free use of our products, utilizing our integrated production system that is less susceptible to external factors.

Technology

The ROHM Group offers a broad variety of products that contribute to solving social issues such as energy conservation, safety, and security, ranging from passive and discrete devices to ICs and modules.

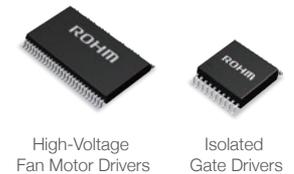

Power Management/Power Supply ICs

ROHM contributes to the evolution of battery life and equipment systems by efficiently providing optimized power to the MCU and CPU, considered the brains of the device. We combine not only power supply ICs, but control ICs as well that improve application reliability and efficiency.

Motor Drivers (Motor Controllers)

Nearly half of the electric power consumed worldwide is said to be due to motors, and this power demand is only expected to rise as the number of motor-equipped products such as air conditioners and robots continues to increase. ROHM contributes to a reduction in worldwide power consumption through high efficiency motor drive by pursuing high accuracy motor drivers.

General-Purpose ICs

ROHM's broad lineup includes memory, op-amps/comparators, reset ICs, power supply ICs, data converters, and other products featuring systemized characteristics and packages that contribute to improved functionality in a range of devices.

Microcontrollers (Low-Power MCUs)

We have achieved class-leading energy saving characteristics using proprietary low-power technology. Our lineup includes 'tough' MCUs featuring improved resistance to noise and high temperatures that offer greater reliability and reduced power consumption in home appliances and industrial equipment.

Wireless Communication Devices

We respond to the expanding needs of the IoT market with wireless devices that support a range of protocols including Bluetooth®, Wi-SUN that enables communication over long distances with minimal energy, and EnOcean's batteryless standard.

Transistors

We are moving forward with expanding and enhancing our portfolio of high-power devices such as PrestoMOS and IGBTs (Isolated Gate Bipolar Transistors) based on our industry-leading SiC-MOSFETs while pursuing technologies in the compact, low-power sector.

At the same time this will allow us to contribute to greater power savings and miniaturization in industries ranging from automotive and industrial equipment to smartphones.

Small-Signal Transistors

SiC-MOSFETs

Diodes

ROHM offers a wide lineup to support low loss and high reliability in a variety of applications, including Schottky barrier diodes for rectifying the secondary side of power supply circuits, TVS (Transient Voltage Suppression) diodes widely used for circuit protection, and Zener diodes.

TVS Diodes

Schottky Barrier Diodes

LEDs/Laser Diodes

Compact, high-power devices are achieved by combining proprietary device and precision processing technologies. Recently, we have expanded our development into new fields such as motion and position sensors.

Compact High-Intensity 3-Color Chip LEDs

Multi-Beam Lasers

Resistors

As a resistor pioneer, ROHM developed the world's first rectangular chip resistors in 1976 and continues to lead the industry.

We have further strengthened our product lineup with high reliability, high power products that support the automotive and industrial equipment fields.

PSR Series

GMR Series

High-Power Shunt Resistors

Thermal Printheads

Thermal printheads are taking the top share in markets such as receipt and logistics barcode printers by utilizing high reliability thin-film and deposition technologies.

High Reliability Thermal Printheads

Sensing Devices

ROHM creates a wide range of sensing devices by combining a variety of sensor elements that leverage MEMS (Micro-Electro Mechanical System) and photonics technologies with ASICs (Application-Specific Integrated Circuits) optimized for using these elements.

Accelerometers

ROHM Sensor Medal

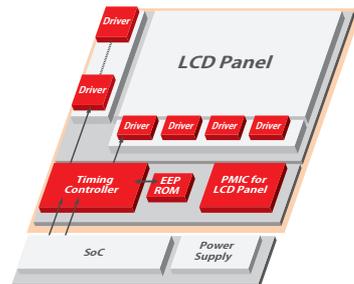

Analog Solutions

Delivering high-performance power control through a fusion of analog and control technologies

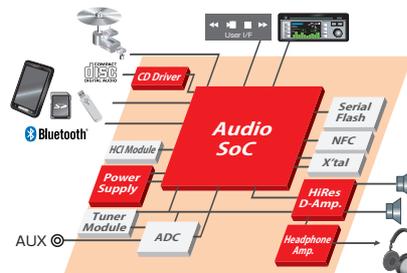

Chipsets for Automotive LCD Panels

ROHM was the first in the world to successfully support functional safety in devices equipped with LCD panels by sharing information as necessary between each constituent IC, such as driver ICs and timing controllers for driving high definition LCD panels and power supply ICs that optimally power these components. We achieve the high level of quality demanded by the automotive sector and contribute to the use of LCD panels for side mirrors and the instrument panels which are essential for avoiding accidents.

High-Resolution Audio Reference Design

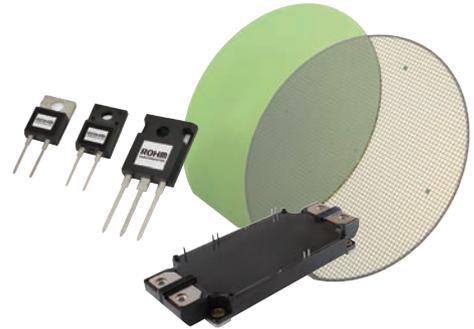

In each process of our vertically integrated production system we established design technology for creating the target sound by first identifying the parameters that affect sound quality and then adjusting each individually. Our commitment to analog technology allows us to respond to the demand for higher fidelity and higher resolution sound sources.

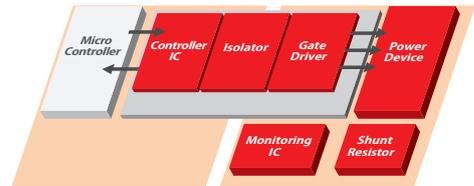

Formula E (F1 for Electric Cars)

As a stage for showcasing electric vehicle innovation, Formula E continues to attract motor sports fans around the world. An official technology partner of Formula E team Venturi, ROHM contributes to the evolution of advanced power electronics systems by supplying SiC devices that deliver dramatically reduced power savings and miniaturization.

Power Solutions for Inverters

Realizing power savings in motors that handle large amounts of power requires higher performance inverters for industrial equipment, automotive applications, and large home appliances. ROHM achieves greater power savings and performance in a variety of inverters by combining module technologies and supplying control ICs and gate drivers that maximize the characteristics of SiC and other power devices.

Power Solutions

Maximizing the characteristics of power devices through control and module technologies

Sensor Solutions

Supporting IoT through sensors, wireless communication devices, and ASICs

Machine Health Monitoring Solutions

Incorporating IoT into production facilities to monitor environmental conditions and equipment status makes it possible to improve operation through visualization and prevent machine failures in advance by analyzing the collected data. ROHM brings together a wide range of sensors and wireless communication devices to provide monitoring solutions optimized for devices and the environment that can be easily retrofitted.

Ultra-Compact Devices

ROHM supplies thin, ultra-compact components that support the continuing evolution of smartphones, wearable devices and other increasingly multifunctional devices.

We also offer the smallest components in the world, such as the RASMID series, that contribute to greater miniaturization and functionality.

Mobile Solutions

Contributing to greater miniaturization and improved functionality in mobile devices with the world's smallest components

ROHM Group CSR and CSV Activities

The ROHM Group contributes to the sustainable growth of the Group and healthy development of society by conducting business activities with integrity in accordance with the goals and policies outlined in our Company Mission and Basic Management Policy.

CSR and CSV Compromise the Core of Our Business Activities

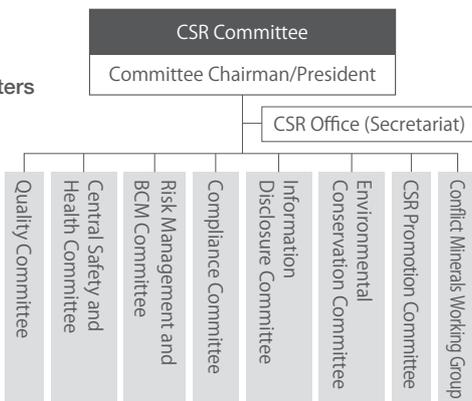

The ROHM Group's Company Mission and Basic Management Policy embody our firm desire to enrich society through our products and provide a basis for each employee to integrate into their own work. Based on these goals and policies, we will work to be a company that can meet the expectations of our shareholders by further expanding CSV to solve social issues through CSR initiatives in line with social requirements and international norms.

Framework for Promoting CSR/CSV

Within the ROHM Group, the CSR committee, comprised of all directors and department heads with equivalent authority, bears responsibility for CSR themes across the entire company - including the environment, society, and governance - with the president acting as chairman. In addition, 7 sub-committees identify issues after performing risk assessments in each field and obtain certification of the management system by implementing the PDCA cycle of CSR management (see table at right).

Promotional Organization at ROHM Headquarters

Management System Acquisition and Operational Status

| Themes | | Management System Certification/ Customer Demands |

*2: VAP stands for Validated Audit Process. This is a third-party audit of the EICC code of conduct.

Illumination show and a cappella concert for families using 'green' energy

CSR/CSV Initiatives

The ROHM Group believes it is necessary to be proactive in solving social issues to ensure the sustainable growth of the company.

In September 2015 the United Nations General Assembly formulated Sustainable Development Goals (SDG) consisting of 17 objectives and 169 targets as action plans to resolve social issues by 2030.

SDGs indicate actions universally required around the world that demand the proactive involvement of companies.

The ROHM Group believes that linking these SDGs to our business activities will help make CSV, which are the shared values of society and the company, a reality.

In order to incorporate CSV and advance the company and society, we set up opportunities for dialogue globally with different stakeholders, establish CSR Priority Issues for the ROHM Group, and actively contribute towards the realization of a sustainable society through our business activities.

SUSTAINABLE DEVELOPMENT GOALS 17 GOALS TO TRANSFORM OUR WORLD

Achieving cyclical growth (CSV) of our employees, the company, and society

At ROHM, we realize that each employee contributes to society through business activities, and from a desire to become a company that is motivated to meet challenges, we will launch new projects and continue to promote work-life management to help employees make more effective use of their time.

In addition, as a global company, we are committed to promoting diversity and actively support female advancement based on the belief that respecting diversity will lead to new innovations.

Developing Human Resources Through Diversity

The ROHM Group states in its corporate objectives and policies that it will 'search extensively for capable human resources and cultivate them as cornerstones for building long-term prosperity' and seeks to utilize and nurture a diverse workforce without being bound by gender, nationality, religion, and other factors. We will actively promote diversity and develop our human resources in order to contribute to continued advancement and become a global leader.

Developing Projects Based on a Firm Understanding of Customer Needs

At each of our business locations throughout the world, the ROHM Group has established a design center that thoroughly understands the needs of our customers in the areas of product development and design, and works quickly to provide products that meet these needs.

We are also pursuing true globalization in order to create new products that can solve environmental and other issues, in line with the needs of our customers.

Classes that Convey the Fun of Manufacturing to the Next Generation

In recent years, there have been fewer opportunities for students to experience manufacturing for themselves, and at the same time interest in science is waning, so in response the ROHM Group developed manufacturing classes for students of all ages, from elementary school to the university level.

Through these classes we hope to inspire as many students as possible to become engineers who can make a positive contribution to society.

(part of ROHM's website):
<http://www.rohm.com/web/global/theatre>

The Rohm Music Foundation was established in 1991, with the goal of contributing to the popularization and development of Japanese music culture.

As of 2016, the foundation has granted 429 scholarships, and continues to sponsor Scholarship Concerts performed by both previous and current scholars.

The Foundation organizes 'Kyoto International Music Students Festival' to promote international exchange for nurture young musicians, and 'Music seminars' to foster professional musicians. The Foundation also supports music-related performances and research, and more.

An active supporter of the music arts for many years, ROHM acquired the naming rights of ROHM Theatre Kyoto, which reopened on January 10, 2016, for the next 50 years.

The theatre is located at the heart of one of the city's most prominent cultural areas, home to numerous historic shrines and art museums.

We hope that this theatre will be cherished as an institution representing culture of art in Japan.
